

Inflatable Type "C" Pipe Plugs

Type "C" Bags are for use wherever a plain rubber bag would not hold. This covered bag consists of an inner bag made of a high quality hydrocarbon-resistant Nitrile Rubber bladder that is then encased in a 100% Polyester fabric cover. The gauge of rubber and polyester vary with the size of the bag. Each size bag is expertly made to insure a snug fit and good shut-off when inflated. Inflating valves and approximately 3 ft. of fill line are standard with each bag; pressure gauges are recommended and can be furnished at an extra cost. Covers can be made flame retardant at an extra cost.
